DETAILED ACTION

Summary

1. This is the initial Office action based on the 10/551552 application filed January 17, 2006.
2. Claims 1- 6 are pending and have been fully considered; claims 7-18 have not been considered.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 11 9(a)-(d), which papers have been placed of record in the file.

Claim Objections

4. Claims 7-18 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claims should refer to other claims in the alternative and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.

Art Unit: 1797

3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1-6 are rejected under 35 USC 103 (a) as being obvious over WESTFALL (US PG PUB 20020116868).

Regarding claim 1, WESTFALL teaches a fuel to be used in an internal combustion engine (paragraph 171); comprising an emulsion between water and a liquid hydrocarbon, and an anti-cavitation additive, including a copolymer comprising units containing at least one carboxylic group and units deriving from at least one monomer having an ethylene unsaturation, and wherein at least a part of the carboxylic groups is in the form of one derivative such as a salt or nitrocompounds (paragraph 125 -133 and claims 1 and 6).

WESTFALL does not disclose proportions of the constituents but they are implicitly comprised in the ranges 20-80 %.

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the fuel of WESTFALL by incorporating selected components of said composition.

Regarding claim 2, WESTFALL teaches hydrocarbyl substituents of these acylating agents have number average molecular weights of about 700 to about 3000 (paragraph 110).

Regarding claim 3 and 4, WESTFALL teaches a water-soluble compound selected from the group consisting of ammonium salts in combinations with (i), (ii), (iii), (v), and (vii) (paragraph 11-17).

Regarding claim 5, WESTFALL teaches the fuel-soluble product (i) may be at least one fuel-soluble product made by reacting at least one hydrocarbyl-substituted carboxylic acid with an alkanol amine (paragraph 109).

Art Unit: 1797

Regarding claim 6, WESTFALL teaches amines useful for reacting with the acylating agent to form the product (i) including but are not limited to amines that are primary, secondary or tertiary amines (paragraph 113).
